5. Estimated cost of works \$1,500.00

6. Estimated time required to construct works 4 years

7. Remarks

REMARKS: The lands listed in this application are not receiving the same amount of water as competing lands in Idaho, that is, farm lands in Idaho from this same source are receiving from four to six acre feet while the lands listed herein have been restricted to less than two acre-feet plus flood water.

On pages 10 and 11 of booklet entitled "Abstract of Claims to the Waters of Salmon River and its Tributaries" issued in 1916 by the State Engineer of Nevada, there is listed 1,139.54 acres as being irrigated on the Vineyard Ranch by water from Salmon River. This acreage would normally require 11.40 second-feet of water. By the decree of the United States District Court in Idaho this land was reportedly decreed approximately 1800.00 acre feet, or 6.00 second feet. The applicant herein applies for the difference between the normal requirement of 11.40 second feet and the decreed 6.00 second feet, or 5.40 second feet which is the total amount of water applied for under applications #11987 and 12412 for the Vineyard Ranch from Salmon River.

As no additional land is to be put under irrigation, all of the present system of irrigation now of record is to be used in the distribution of the water where it can be effectively utilized. The additional points of diversion have been requested for the reason that it was thought more efficient use and distribution of the water could be effected.

These REMARKS are repeated on Application No. 12412 for the reason that both applications should be considered as operating together or as one unit as the Court Decree was so issued.
